MZT: GO enrichment across all contrasts
(−log.. p)

positive regulation of transcription by ...
heterocyclic compound binding
positive regulation of gene expression
cellular anatomical entity morphogenesis
negative regulation of gene expression
NADH dehydrogenase (quinone) (non−electr...
NADH dehydrogenase (ubiquinone) activity
mitochondrial inner membrane
mitochondrial large ribosomal subunit
respiratory chain complex I
purine ribonucleoside monophosphate meta...
phosphorylation
peptide biosynthetic process
mitochondrial translational termination
mitochondrial translational elongation
inner mitochondrial membrane protein com...
ATP metabolic process
amide biosynthetic process
mitochondrial electron transport, NADH t...
mitochondrial respiratory chain complex ...
RNA binding
peptide transport
nuclear−transcribed mRNA catabolic proce...
structural constituent of ribosome
cytosolic large ribosomal subunit
translational initiation
SRP−dependent cotranslational protein ta...
cytosolic small ribosomal subunit
cytoplasmic translation
protein localization to endoplasmic reti...
