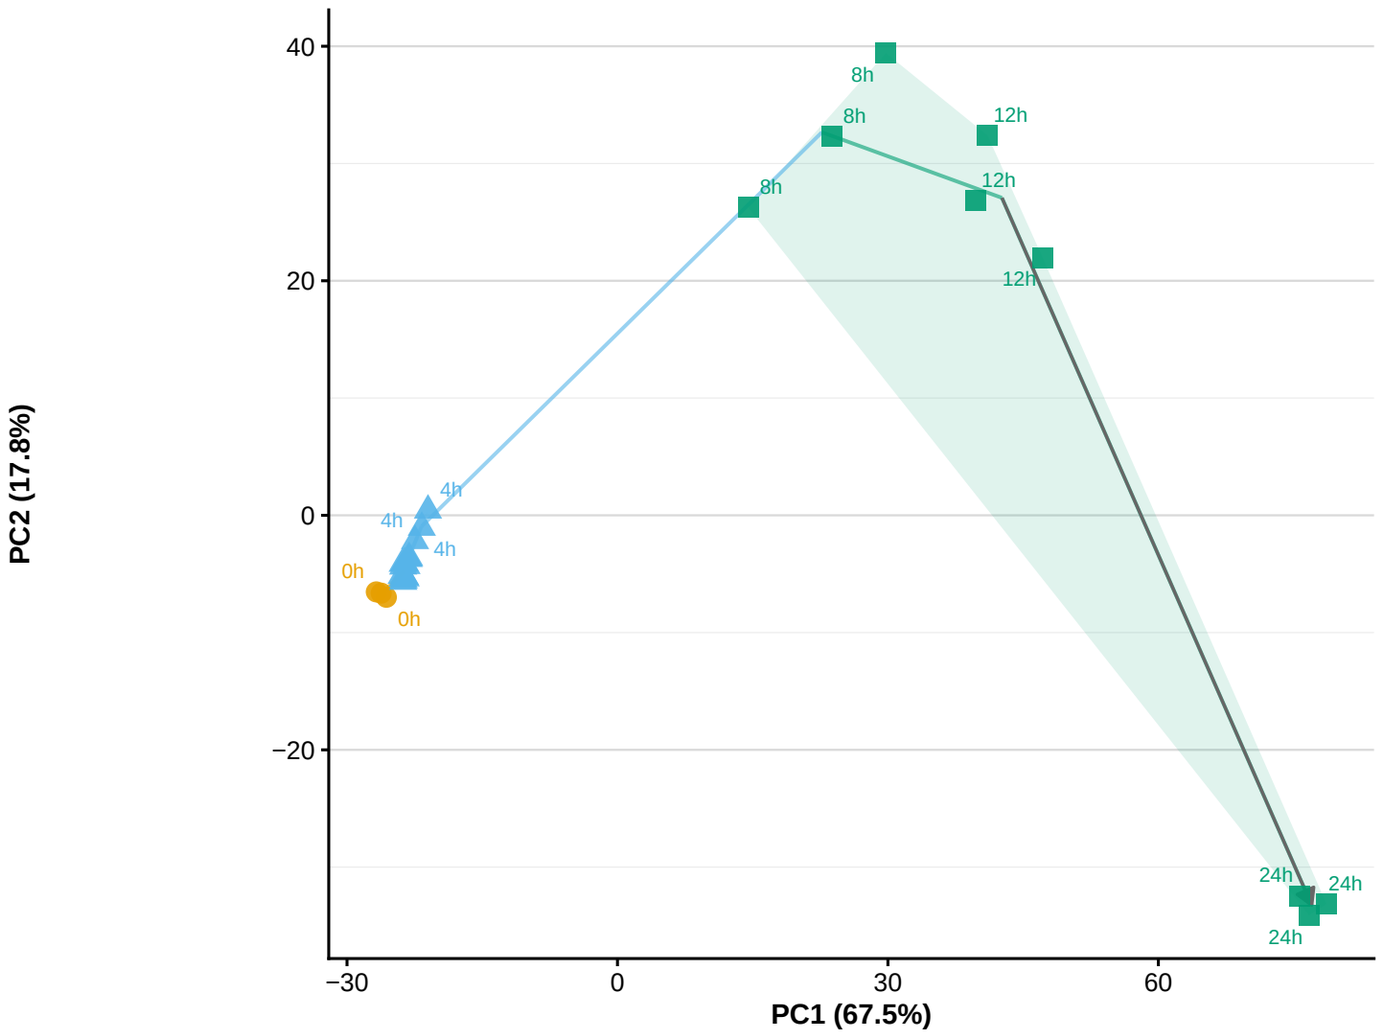
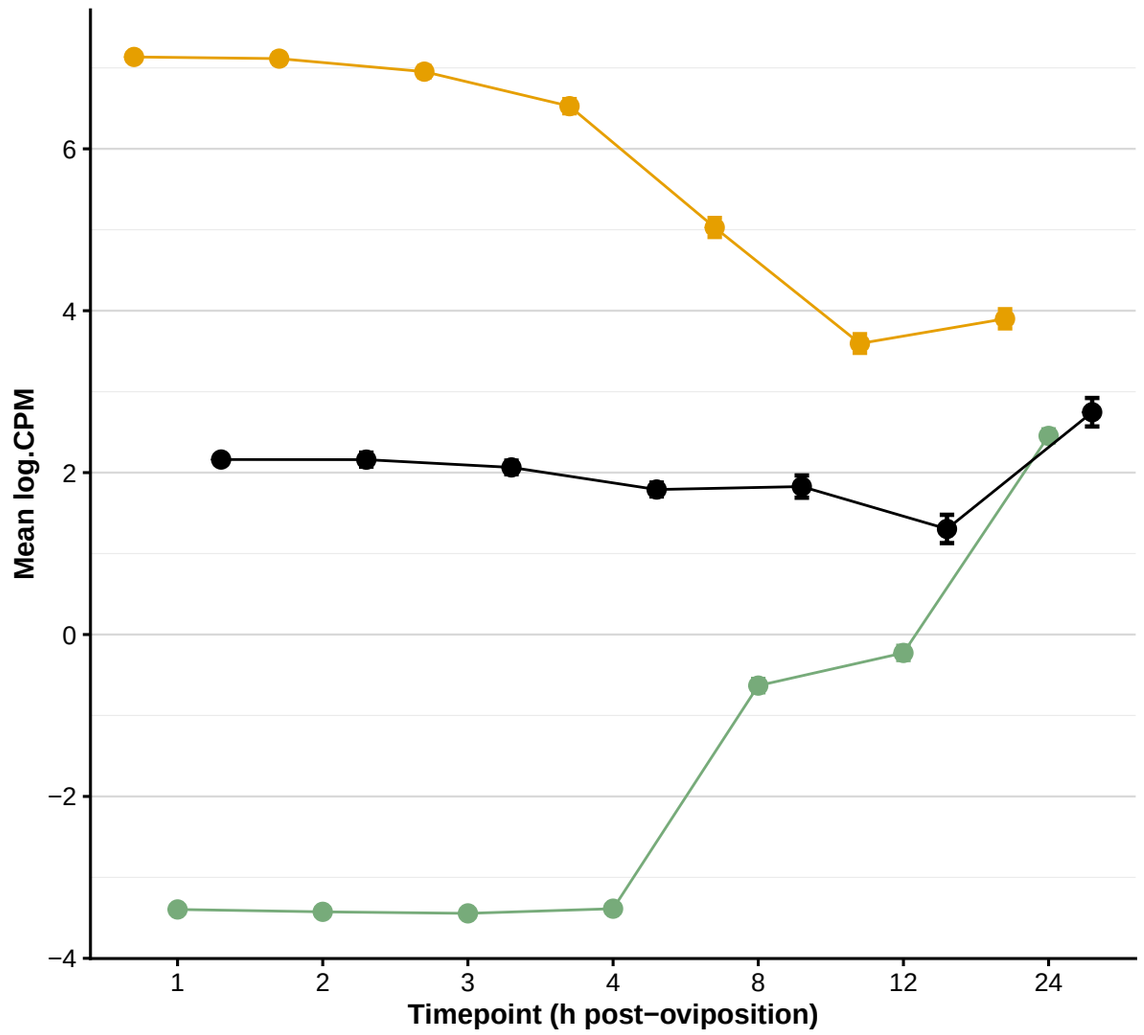
Maternal−to−Zygotic Transition

Developmental stage separation



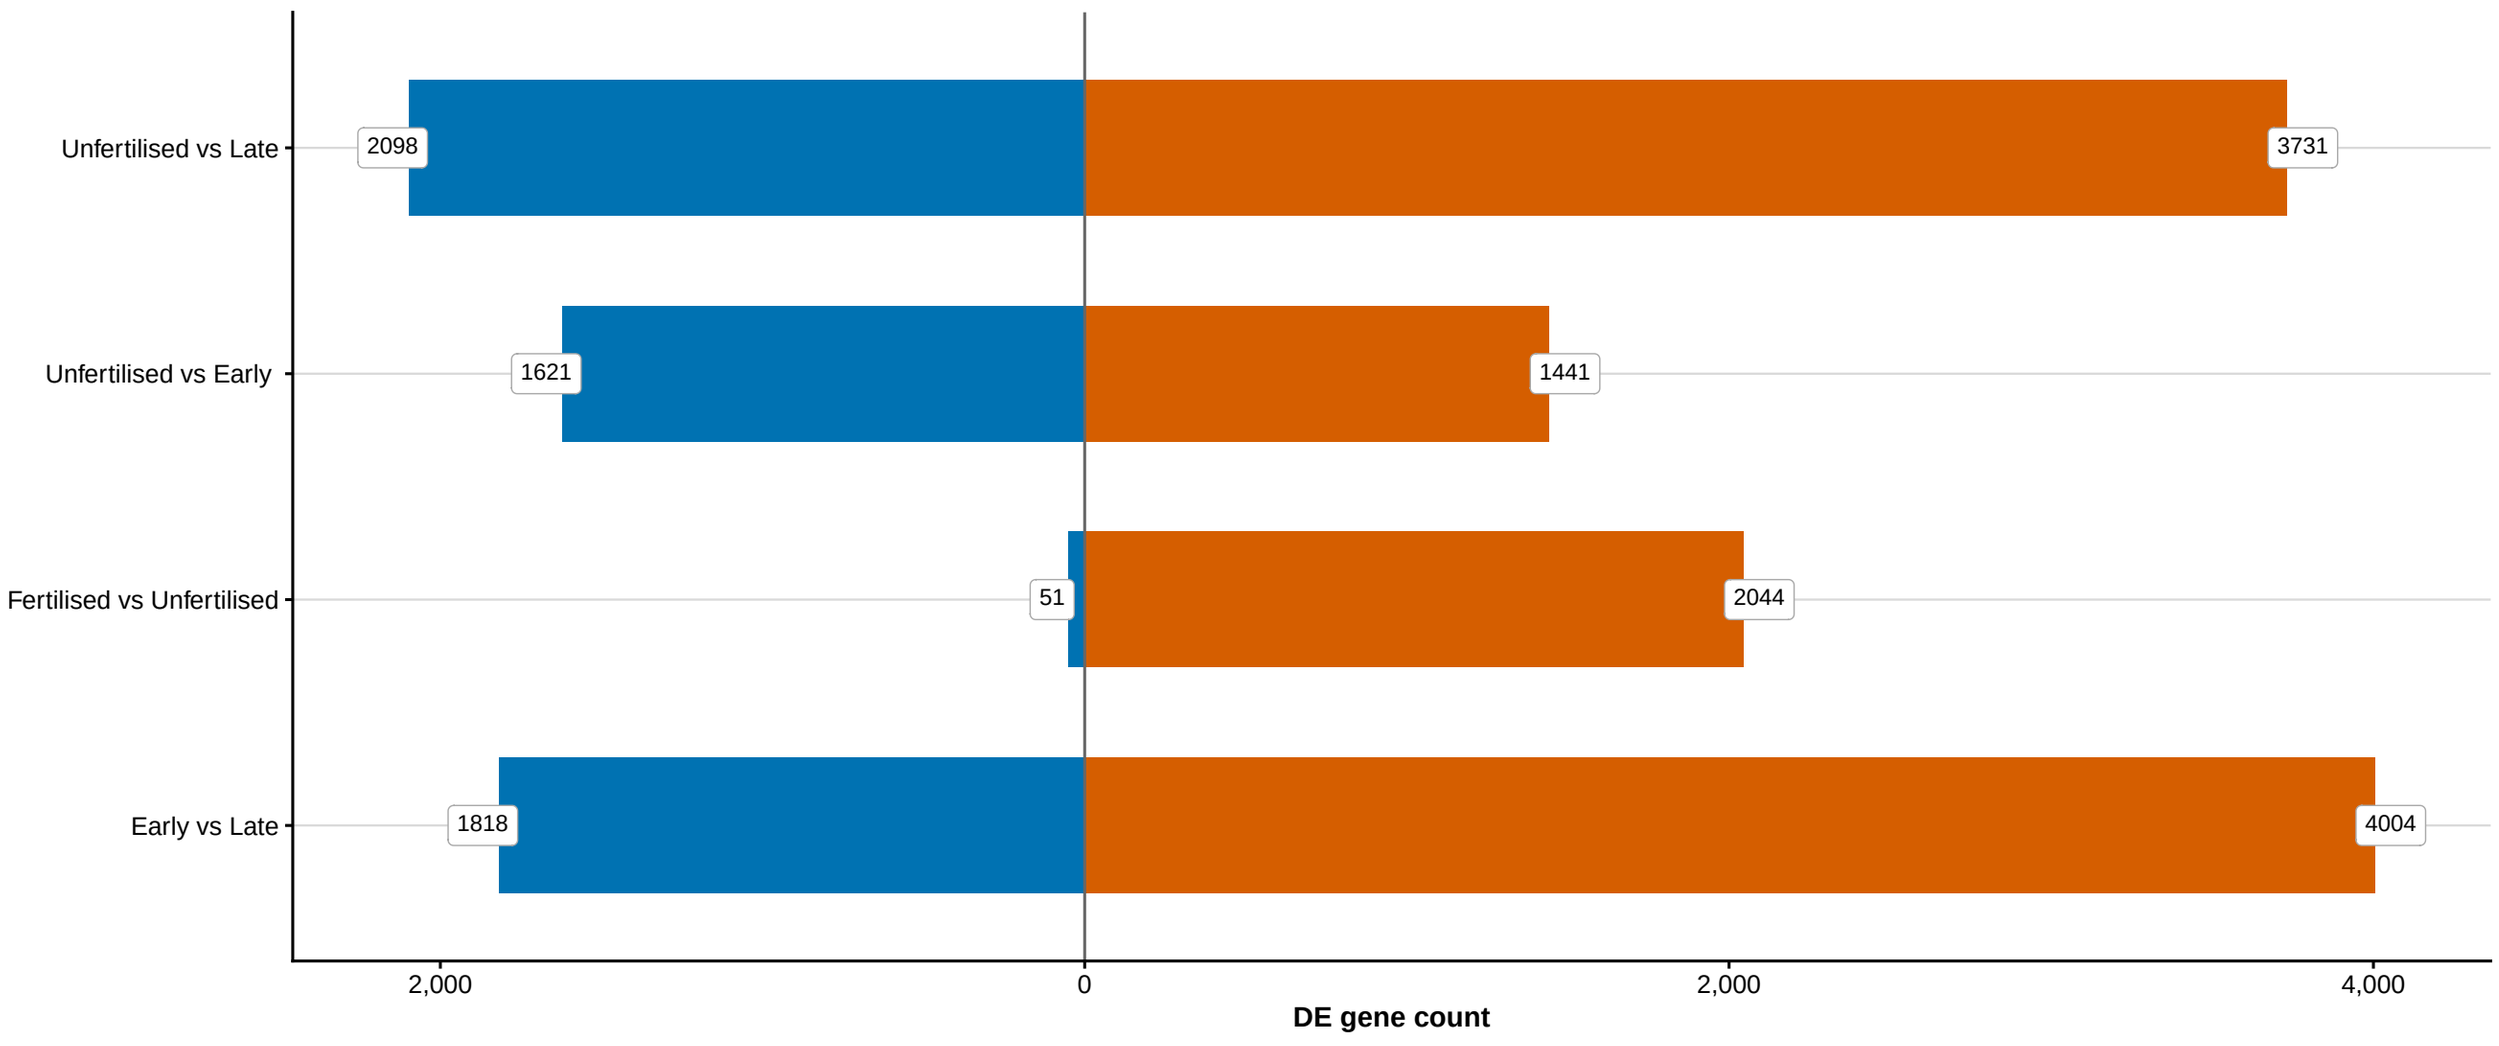
Temporal expression modules



Stage: Unfertilised, Early (1−4 h), Late (8−24 h)

M1: Maternal decay (metabolism / cell cycle)

M2: Transient activation (RNA processing / ribosomes)

M3: Late activation (development / nervous system)


Differentially expressed genes per contrast (FDR < 0.05, |log.FC| > 1)
