Top GO terms per tissue ... medium expressed genes

Top 8 significant BP terms per tissue (p < 0.05)

Abdomen

- transcription−coupled nucleotide...
- mitochondrial translational term...
- mitochondrial translational elon...
- mRNA splicing, via spliceosome
- chromosome organization
- regulation of transcription by R...
- ribonucleoprotein complex locali...
- protein export from nucleus

Accessory Gland

- mRNA splicing, via spliceosome
- transcription−coupled nucleotide...
- chromosome organization
- transcription initiation at RNA ...
- mitochondrial translational term...
- transcription elongation by RNA ...
- internal peptidyl−lysine acetyla...
- nuclear−transcribed mRNA catabol...

Distal Ovary

- mitochondrial translational term...
- mitochondrial translational elon...
- regulation of DNA−templated tran...
- mRNA splicing, via spliceosome
- transcription initiation at RNA ...
- internal peptidyl−lysine acetyla...
- endoplasmic reticulum to Golgi v...
- chromosome organization

Egg

- translational initiation
- peptide transport
- peptide biosynthetic process
- nuclear−transcribed mRNA catabol...
- cytoplasmic translation
- amide biosynthetic process
- SRP−dependent cotranslational pr...
- intracellular protein transport

Proximal Ovary

- mitochondrial translational term...
- mitochondrial translational elon...
- mRNA splicing, via spliceosome
- transcription initiation at RNA ...
- regulation of DNA−templated tran...
- internal peptidyl−lysine acetyla...
- mitochondrial translation
- protein ubiquitination

Testes

- mitochondrial translational term...
- mitochondrial translational elon...
- mitochondrial translation
- transcription initiation at RNA ...
- termination of RNA polymerase I ...
- dolichol−linked oligosaccharide ...
- regulation of DNA−templated tran...
- tRNA methylation
