Medium−expressed genes (variable layer)

Testes

- mitochondrial translational termination 56/69
- mitochondrial translational elongation 53/66
- mitochondrial translation 94/117
- transcription initiation at RNA polymerase I promoter 20/27
- termination of RNA polymerase I transcription 19/22
- dolichol−linked oligosaccharide biosynthetic process 13/16
- regulation of DNA−templated transcription 673/1641
- tRNA methylation 18/21
- transcription−coupled nucleotide−excision repair 37/62
- regulatory ncRNA 3'−end processing 24/36

0 250 500 750

Accessory Gland

- mRNA splicing, via spliceosome 236/314
- transcription−coupled nucleotide−excision repair 54/62
- chromosome organization 547/842
- transcription initiation at RNA polymerase II promoter 128/166
- mitochondrial translational termination 57/69
- transcription elongation by RNA polymerase II 68/89
- internal peptidyl−lysine acetylation 75/98
- nuclear−transcribed mRNA catabolic process, deadenylation−dependent decay 52/61
- ribonucleoprotein complex localization 84/114
- positive regulation of gene expression 710/1239

0 250 500 750

Abdomen

- mRNA splicing, via spliceosome 258/314
- mitochondrial translational termination 67/69
- mitochondrial translational elongation 63/66
- chromosome organization 587/842
- transcription−coupled nucleotide−excision repair 57/62
- regulation of transcription by RNA polymerase II 754/1230
- ribonucleoprotein complex localization 91/114
- protein export from nucleus 110/149
- nuclear−transcribed mRNA catabolic process, deadenylation−dependent decay 53/61
- transcription initiation at RNA polymerase II promoter 130/166

0 250 500 750 1000

Distal Ovary

- mitochondrial translational termination 69/69
- mitochondrial translational elongation 66/66
- regulation of DNA−templated transcription 1016/1641
- mRNA splicing, via spliceosome 232/314
- transcription initiation at RNA polymerase II promoter 124/166
- internal peptidyl−lysine acetylation 80/98
- endoplasmic reticulum to Golgi vesicle−mediated transport 101/128
- chromosome organization 570/842
- border follicle cell migration 95/122
- snRNA transcription by RNA polymerase II 58/70

0 500 1000

Proximal Ovary

- mitochondrial translational termination 67/69
- mitochondrial translational elongation 64/66
- mRNA splicing, via spliceosome 209/314
- transcription initiation at RNA polymerase II promoter 109/166
- regulation of DNA−templated transcription 795/1641
- internal peptidyl−lysine acetylation 70/98
- mitochondrial translation 110/117
- protein ubiquitination 208/373
- nuclear−transcribed mRNA catabolic process, deadenylation−dependent decay 40/61
- mitochondrion organization 242/385
